Dao層建立測試程式(1)

Dao層建立測試程式(2) @Transactional

```
☑ StudentDaoImplTest.java 
☒

 8 import static org.junit.jupiter.api.Assertions.*;
10 import com.example.demo.model.Student;
11
12 @SpringBootTest
13 public class StudentDaoImplTest {
14
15⊜
       @Autowired
16
       private StudentDao studentDao;
17
18⊜
       @Transactional
19
       @Test
       public void getById() {
20
           Student student = studentDao.getById(3);
21
22
           assertNotNull(student);
23
           assertEquals("Judy", student.getName());
           assertEquals(100.0, student.getScore());
24
           assertTrue(student.isGraduate());
25
           assertNotNull(student.getCreateDate());
26
27
28
29⊜
       @Transactional
30
       @Test
31
       public void deleteById() {
32
           studentDao.deleteById(3);
           Student student = studentDao.getById(3);
33
34
           assertNull(student);
```

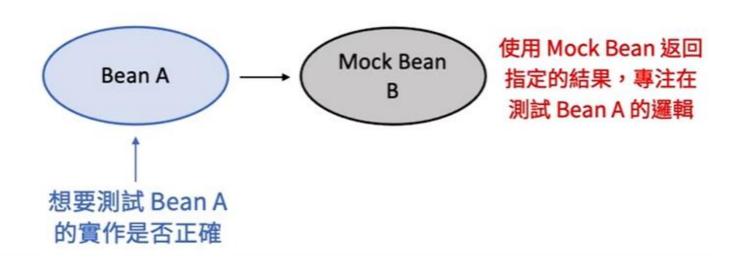

Dao層 測試檔加上註解-@Transactional

- ▶ @Transactional:在測試檔的測試方法上,加上此註解後,在執行完此測試方法後,spring boot就會rollback整個方法所執行過的資料庫操作
- ▶ 用法:可以加在方法上、也可以加在class上
- ▶ 用途:在單元測試結束後,會rollback所有資料庫操作,將數據恢復原狀
- ▶ @Transactional註解在測試檔與正式程式中,用途不同

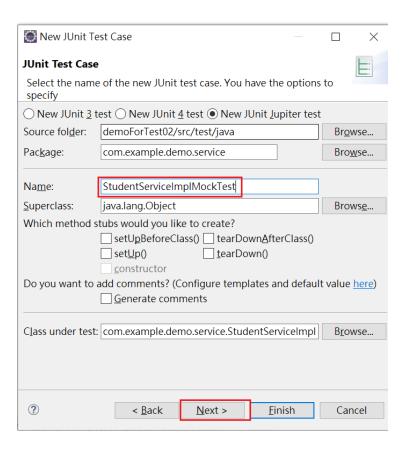

Service層Mock測試

▶ 目的:避免為了測試某一個單元測試,而去建立了整個bean的依賴性

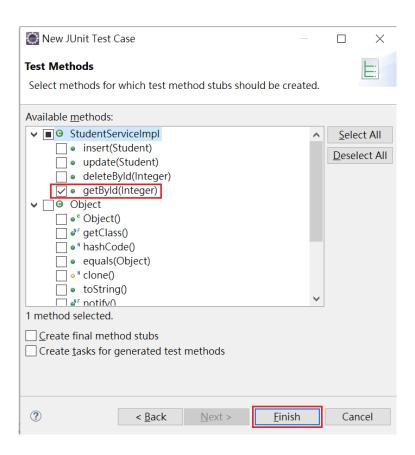

▶ 作法:創造一個假的bean,去替換掉Spring容器中原有的Bean

Service層建立測試程式(1)

Service層建立測試程式(2)

Service層建立測試程式(3)

```
■ StudentServiceImplMockTest.java
